

3.2 Proposed Solution

Auto Ticket Classification using Flow Designer

S.No.	Parameter	Description
1	Problem Statement	School IT helpdesk tickets are classified and assigned manually, causing delay and errors
2	Idea / Solution Description	Flow Designer flow that triggers on incident creation, classifies by keywords, sets priority and assigns the right group
3	Novelty / Uniqueness	Fully low-code, no manual triage, easy to extend with new keywords or an ML model later
4	Social Impact / Customer Satisfaction	Faster fixes for classes and labs; less waiting for students and teachers
5	Business Model (Revenue)	Internal school efficiency tool; saves staff hours. Can be offered to other institutions as a ready-made configuration
6	Scalability of the Solution	Add categories, groups and keyword rules without changing the flow design; handles growing ticket volume
