

3.3 Solution Architecture

Auto Ticket Classification using Flow Designer

Components

- **Presentation:** service portal form where users raise incidents
- **Logic:** Flow Designer flow with condition checks on the short description
- **Data:** incident table, categories, priorities and assignment groups
- **Output:** auto-filled category, priority, assignment group and email alerts

Flow Logic

If short description contains	Category	Priority	Assignment Group
wifi, internet, network	Network	High	Network Support
projector, display, printer, monitor	Hardware	Medium	Hardware Support
password, login, account, locked	Account/Password	Medium	Service Desk
slow, hang, install, software	Software	Low	Software Support
anything else	Other	Low	Service Desk (default)
