

2.1 Customer Journey Map

Auto Ticket Classification using Flow Designer

Journey of a user (teacher/student) raising an IT issue, before and after the automated solution.

Stage	User Action	Touchpoint	Experience Today (Manual)	Experience With Solution	Opportunity
Awareness	Notices Wi-Fi, projector or password issue	Classroom / lab	Unsure whom to contact	Knows to raise a ticket on the portal	Simple portal link
Reporting	Fills incident form with short description	Service portal	Form details may be vague	Email acknowledgement received instantly	Guide users to describe the issue clearly
Classification	Waits	Helpdesk queue	Staff read and sort manually; delay	Flow classifies by keywords in seconds	Rule and keyword tuning
Assignment	Waits	Helpdesk queue	Wrong team sometimes	Correct group assigned automatically	Group mapping per category
Resolution	Gets help	Technician	Late start	Faster start, urgent issues first	Priority based SLA
Closure	Confirms fix	Email / portal	No clear closure	Closure notification	Feedback survey
