

2.2 Solution Requirements

Auto Ticket Classification using Flow Designer

Functional Requirements

FR No.	Requirement	Sub Requirement
FR-1	Incident creation	User submits an incident with short description and details through the portal or form
FR-2	Automatic classification	Flow reads the short description and sets category (Network, Hardware, Software, Account/Password, Other)
FR-3	Automatic priority	Flow sets priority (Critical, High, Medium, Low) using category and keywords
FR-4	Automatic assignment	Ticket is assigned to the matching support group
FR-5	Notification	Requester receives an acknowledgement; assignee receives a new-ticket alert
FR-6	Reporting	Admin can view tickets by category, priority and state

Non-Functional Requirements

NFR No.	Requirement	Description
NFR-1	Usability	Simple form that students and teachers can use without training
NFR-2	Security	Role-based access; only IT staff can edit flow and assignment groups
NFR-3	Reliability	Flow runs on every new incident; unclassified tickets fall back to a default group
NFR-4	Performance	Classification and assignment complete within seconds of ticket creation
NFR-5	Availability	Runs on the ServiceNow cloud instance with no extra server
NFR-6	Scalability	New categories and keywords can be added without rebuilding the flow
