

2.3 Data Flow Diagram and User Stories

Auto Ticket Classification using Flow Designer

Data Flow Diagram (Level 0)

Data moves from the user to the incident form, the flow reads the short description, decides category and priority, assigns the support group, and writes the result back to the incident table. Notifications go to the requester and the assignee.

User Stories

User Type	Functional Requirement	Story No.	User Story / Task	Acceptance Criteria	Priority	Release
Student/Teacher	Incident creation	US-1	As a user, I can raise an IT incident so that my issue is recorded	Incident is created with a number	High	Sprint-1
Student/Teacher	Notification	US-2	As a user, I get an acknowledgement so I know my ticket was received	Email received after creation	Medium	Sprint-2
IT Staff	Auto classification	US-3	As IT staff, I want tickets classified automatically so I save sorting time	Category field is filled by the flow	High	Sprint-1
IT Staff	Auto priority	US-4	As IT staff, I want priority set automatically so urgent issues come first	Priority matches keyword rules	High	Sprint-2
IT Staff	Auto assignment	US-5	As IT staff, I want tickets routed to the right group	Assignment group is set	High	Sprint-2
Admin	Reporting	US-6	As an admin, I want a report by category and priority	Report shows counts	Medium	Sprint-3
