

1.2 Empathy Map Canvas

Auto Ticket Classification using Flow Designer

Empathy map for the main user: a teacher or student raising an IT ticket, and the IT staff who handle it.

Quadrant	User: Teacher / Student	User: IT Staff
Says	"My projector is not working, class is about to start." / "I forgot my password again."	"There are too many tickets today." / "Which team should take this one?"
Thinks	Will someone fix this in time? Why is it taking so long?	Which tickets are urgent? I may be missing something important.
Does	Submits a ticket, calls or visits the IT room, follows up repeatedly	Reads every ticket, picks a category, sets priority, assigns it manually
Feels	Frustrated, anxious, ignored	Stressed, overloaded, pressured by repeated follow-ups
Pains	Long waiting time, no status update, wrong team handles ticket	Repetitive sorting work, human errors, delayed response
Gains	Quick resolution, clear status, less follow-up	Automatic classification and assignment, more time for real fixes
